

# REALSAFE

REALSAFE mobile Health & Safety software can:

- Reduce the costs associated with Health & Safety checks
- Enable conformity to government legislation
- Give peace of mind that Health & Safety checks are being performed correctly
- Reduce Employers Liability insurance premiums
- Improve the safety of your workforce
- Increase staff efficiency

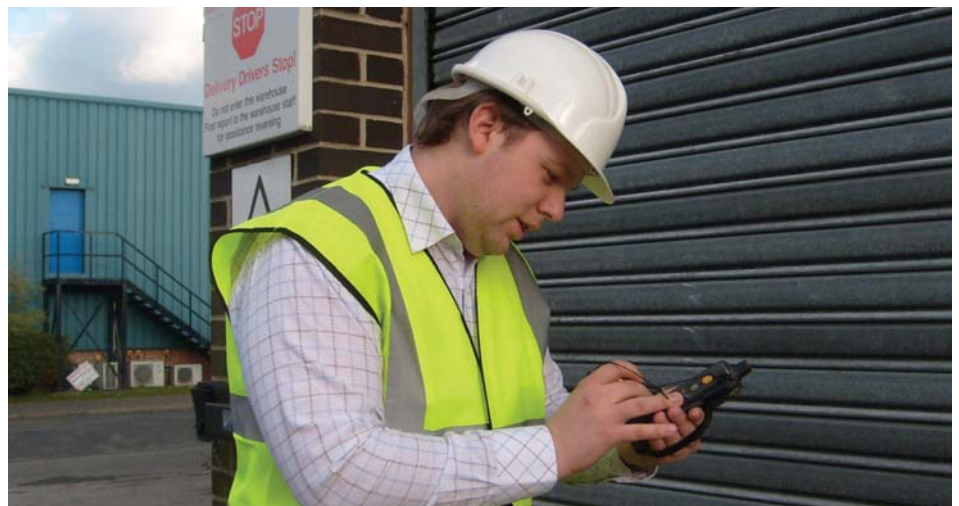

REALSAFE is:

- A mobile solution that removes paper and provides real time accuracy and reporting facilities for your Health & Safety compliance

## MOBILISING YOUR HEALTH & SAFETY MANAGEMENT

REALSAFE is a mobile data capture solution for the Health & Safety industry, designed to automate and verify every aspect of a company's current health and safety procedure. Incorporating simple checklist criteria, this easy to use and configure web-enabled solution uses GPRS handheld technology for ease of speed, accuracy and reporting. Based on a series of modular applications, this ultimate software allows you to upload your current paper based auditing methods for optimum compliance in real-time.

REALSAFE Health & Safety solution operates on a handheld device and is ideal for carrying out any Health & Safety inspections. REALSAFE can be used in offices, warehouses, construction sites, kitchens, in fact anywhere that Health & Safety checks need to be done. Whether you are public or private sector, on one site or many, REALSAFE will give you on-screen prompts that lead to immediate inspection reports, failure identification and trends by building or area. REALSAFE has the right attention to detail and all the right features, yet in an easy to control package.

# REAL TIME

MOBILISING YOUR DATA CAPTURE

## User benefits:

- Ease of use for stress free health and safety checks
- Easy to add and edit data whilst out on site
- Limited IT skills required
- On-going customer support contracts and effective software training
- Easy to assign and verify jobs
- Effective sorting, grouping, filtering

## Configurable to meet your needs:

- Ability to incorporate your existing checklist criteria
- Traffic light system for scheduling
- Comes prepared ready for use
- Configurable scoring criteria i.e., pass/fail
- Tailored by zone, building and room set-up to meet your assessment criteria
- Additional modules available

## Powerful features:

- Uses the latest .NET technologies
- Choice of SQL server or access database
- Captures free text, icons, pictures, customer signatures
- Allows integration with RFID technology to verify the inspection process
- Networked for multiusers/multisite with varying user permissions

## Effective reporting for informed management decisions:

- By date, area, contractor, failures
- Extract and email reports
- Allows random inspections
- Manage third-party contractors
- Reduces administration and improves customer and employee satisfaction

# ARE YOU SERIOUS ABOUT YOUR HEALTH & SAFETY?

## Inspections

Whatever industry you are in **REALSAFE** will dramatically reduce your paperwork, save you time and cut down on errors. **REALSAFE** couldn't be simpler. Following our initial consultancy, we'll preconfigure **REALSAFE** to incorporate all your Health & Safety needs. If you're happy with your current process, we'll simply take your existing checklist criteria and incorporate these into **REALSAFE**. **REALSAFE** allows a structured approach to your inspection process

by allowing multiple reporting levels by client, building, region and room for example. It's a form based checking procedure incorporating any scoring criteria to meet your needs alongside comments. You can even take pictures of issues to back up inspection. When on site, data can simply be transferred from the handheld unit to the centralised PC (by cradle or real time wireless connection) to consolidate results.

## Effective Reporting

In-depth analysis is easy and reporting preparation quick – ideal for highlighting any consistent issues, identifying when an inspection is due/overdue and making informed management decisions by period with associated reasoning, recommendations and rectification. The in-depth reporting module allows for complete analysis of audits, you can report by room, zone, building, on failures, review comments by assessor or manager, and plan future inspections and analyse trends over a period.

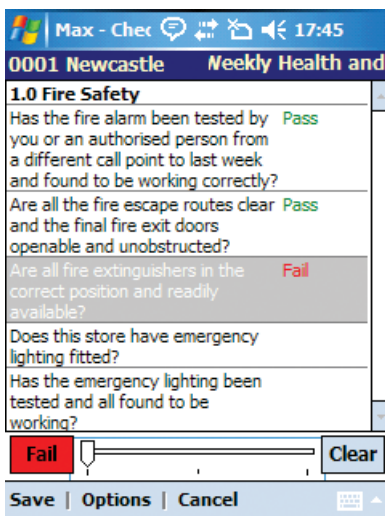

## Modules

We can either take your current Health & Safety checklists and incorporate these onto **REALSAFE**, or you can add from the modules we offer. We can suggest modules in:

- Fire Safety
- Manual Lifting
- Transport
- Electrical Safety
- Machine Safety
- Noise
- Forklift Truck Safety
- COSHH
- Construction Site Safety
- Kitchen Safety

## All the support you need

**REALSAFE** comes with a raft of supporting services, including consultancy and training – to ensure the system meets your needs and that you understand it. We'll customise it for your organisation and set up the system ready for use at your office. Backing up all this is excellent customer support by email or phone, a host of accessories, and upgrades to software.

For more information on **REALSAFE** or for a free no-obligation demonstration email RealTime DC now on [sales@realtimedc.com](mailto:sales@realtimedc.com) or call 01243 790500
